    $name2=array("umesh","sonoo","kartik","smith");
    $name3=array_intersect($name1,$name2);
    foreach( $name3 as $n )
    {
      echo "$n<br />";
    }
  ?>
</div>
<div>
  <h4>7.array_change_key_case()</h4>
  <?php
    $salary=array("Sonoo"=>"550000","Vimal"=>"250000","Ratan"=>"200000");
    print_r(array_change_key_case($salary,CASE_UPPER));
  ?>
</div>
<div>
  <h4>8. array_chunk() function</h4>
  <?php
    $salary=array("Sonoo"=>"550000","Vimal"=>"250000","Ratan"=>"200000");
    print_r(array_chunk($salary,2));
  ?>
</div>
</body>
>
</html>
```

String Functions

1. strtolower()

'strtolower()' function return a string in lower case.
this function can return a uppercase in to lowercase.

2. strupper()

'strupper()' function return a string in UpperCase .
THIS FUNCTION CAN RETURN A LOWERCASE LETTER IN TO UPPERCASE.

3. strlen()

'strlen()' function return a length of string.
The total char in string is 46 .

4. strrev()

'strrev()' function return reversed string.
'gnirts desrever nruter noitcnuf')(verrts'

5. ucwords()

'ucwords()' function return string converting first character of each word into uppercase .
'ucwords()' Function Return String Converting First Character Of Each Word Into Uppercase .

Array Functions

1. array()

'array()' function to create an array.
'string integer float array null

2. count()

'count()' function return a total number of elements in array.
5 elements in array : string integer float array null

3. sort()

array float integer null string

4. array_reverse() function

autumn
spring
winter
summer

5. array_search() function

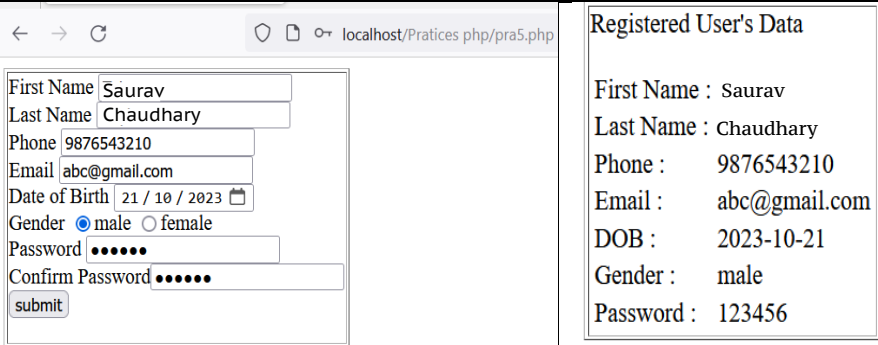

2

6.array_intersect() function

sonoo
smith

5.	Write a PHP script to show the use of superglobal array with Registration Form.
Code	<pre> <!DOCTYPE html> <head> <title>Registration Page</title> </head> <body> <div> <table border=1> <tr><td> <form method="post" action="<?php echo \$_SERVER['PHP_SELF'];?>"> <div> <label for="fname">First Name </label><input type="text" name="fname" required> </div> <div> <label for="lname">Last Name </label><input type="text" name="lname" required> </div> <div> <label for="phone">Phone </label><input type="text" name="phone" required> </div> <div> <label for="email">Email </label><input type="email" name="email" required> </div> <div> <label>Date of Birth </label><input type="date" name="dob" required> </div> <div> <label for="gender">Gender</label> <input type="radio" name="gen" value="male" required><label>male </label> <input type="radio" name="gen" value="female" required><label>female</label> </div> <div><div> <label for="password">Password </label><input type="password" name="pass" required> </div> <div> <label for="cpass">Confirm Password</label><input type="password" name="cpass" required> </div> <div> <button type="submit">submit</button> </div> <div>

Update

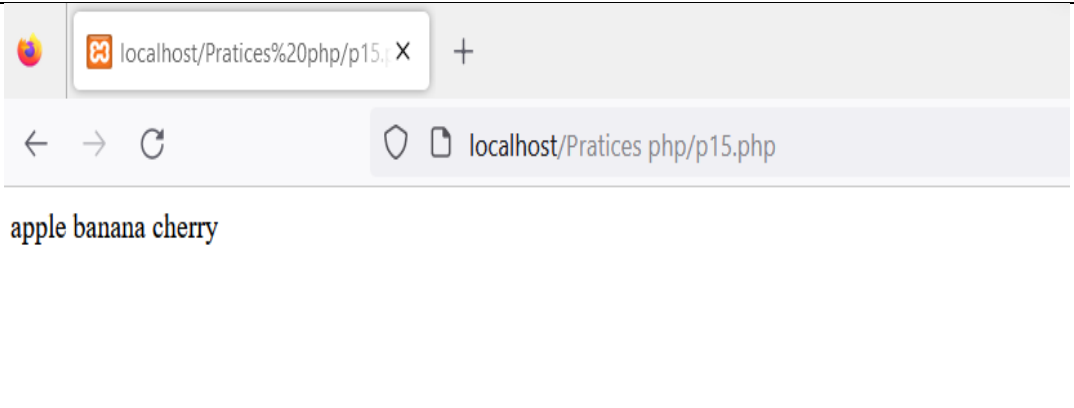

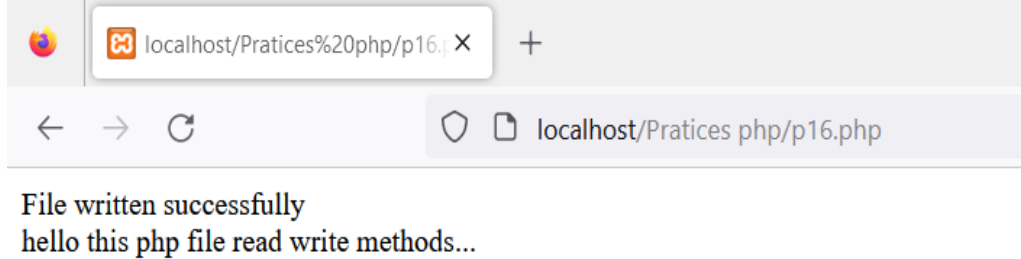

11	Write a PHP script to create class, destructor, constructor and object to access class method.
Code	<pre><?php class Vehicle { public \$model; public \$color; public \$type; function __construct(\$model,\$color) { \$this->model=\$model; \$this->color=\$color; } function __destruct() { echo "The car model is {\$this->model} and car color is {\$this->color}"; } function get_model() { return \$this->model; } function get_color() { return \$this->color; } } \$toyota = new Vehicle("auris","black"); ?></pre>
Ouput :	 <p>The car model is auris and car color is black</p>

12	Write a PHP script to show the use of Inheritance and access modifiers
Code	<pre><?php class Employee { public \$name="Ajit"; protected \$profile="HR"; private \$salary=50000; public function show() { echo "Employee Name :".\$this->name."</br>"; echo "Profile :".\$this->profile."</br>"; echo "salary :".\$this->salary."</br>"; } } class Employee2 extends Employee { function display() { echo "welcome :".\$this->name."</br>"; echo "profile :".\$this->profile."</br>"; // echo "salary :".\$this->salary."</br>"; } } \$obj=new Employee2; \$obj->display(); ?></pre>
Output :	

13.	Write a PHP script to show the use of abstract class.
Code	<pre> <?php abstract class Car { public \$name; public function __construct(\$name) { \$this->name=\$name; } abstract public function intro():string; } class Honda extends Car { public function intro() : string { return "Choose Indian Quality ! I'm an \$this->name "; } } class Toyota extends Car { public function intro(): string { return "Proud to be Indian ! I'm a \$this->name!"; } } class Mahindra extends Car { public function intro(): string { return "Indian also likes a \$this->name"; } } \$honda = new Honda("Honda"); echo \$honda->intro(); echo "
"; \$toyota=new Toyota("Toyota"); echo \$toyota->intro(); echo "
"; \$mahindra = new Mahindra("Mahindra"); echo \$mahindra->intro(); ?> </pre>
Output :	

14.	Write a PHP script to show the use of Interface.
Code	<pre><?php interface Animal { public function makeSound(); } class Cat implements Animal { public function makeSound() { echo "meow ...!
"; } } class Dog implements Animal { public function makeSound() { echo "Bark...
"; } } class Mouse implements Animal { public function makeSound() { echo "Squeak...
 "; } } \$cat=new Cat(); \$dog=new Dog(); \$mouse=new Mouse(); \$animals=array(\$cat,\$dog,\$mouse); foreach(\$animals as \$animal) { \$animal->makeSound(); } ?></pre>
Output :	

15.	Write a PHP script to show the use of Iterable.
Code	<pre> <?php class MyIterator implements Iterator { private \$items = []; private \$pointer = 0; public function __construct(\$items) { \$this->items = array_values(\$items); } public function current() { return \$this->items[\$this->pointer]; } public function key() { return \$this->pointer; } public function next() { \$this->pointer++; } public function rewind() { \$this->pointer = 0; } public function valid() { return \$this->pointer < count(\$this->items); } } function printIterable(iterable \$myIterable) { foreach(\$myIterable as \$item) { echo \$item; } } \$iterator = new MyIterator(["apple ", "banana ", "cherry "]);printIterable(\$iterator); ?> </pre>
output	 <p>apple banana cherry</p>

16.	Build a PHP page and use various PHP File functions (Read and Write).
Code	<pre> <?php //write the file \$fp = fopen('data.txt', 'w'); fwrite(\$fp, 'hello '); fwrite(\$fp, 'this php file read write methods...'); fclose(\$fp); echo "File written successfully
"; ?> <?php //read the file \$filename = "data.txt"; \$handle = fopen(\$filename, "r"); \$content = fread(\$handle, filesize(\$filename)); echo \$content; fclose(\$handle); ?> </pre>
Data.txt	hello this php file read write methods...
Output	 <p>File written successfully hello this php file read write methods...</p>
